

PRO/KEY PROGRAM

Keys and key control are integral parts of maintaining building security, whether it's during construction or due to changes in occupancy. At Taymor, we work directly with design and development teams to identify the best keying options for the job. Whether it's a simple keyed alike system operated by one key, through to a multi-level grand master keying system for the most complex of applications. We have extensive experience working on large-scale projects and welcome the opportunity to ensure safe and accurate key control.

KEYING OPTIONS

- › Keyed Alike (KA)
- › Keyed Different (KD)
- › Master Keying (MK)
- › Grand Master Keying (GMK)
- › Construction Keying (CK)

- › Custom logo keys
- › Custom escutcheon etching
- › Custom key stamping and cylinder marking

Minimum quantities and lead times apply.
Please contact Taymor for details.

KEYING OPTIONS

KEYED ALIKE (KA) systems are a perfect solution for single-family homes where homeowners may want one key to open multiple locks; for example, the front entrance and the back door.

KEYED DIFFERENT (KD) systems are common in multi-family buildings where each suite opens with a unique key.

MASTER KEYING (MK) systems are common in multi-family, commercial and institutional buildings where multiple levels of building access are required. Individual suites each have a unique key and the master key permits access to all suites for maintenance, and management staff as well as first responders.

GRAND MASTER KEYING (GMK) allows the owner or strata responsible for multiple buildings to have one grand master key that operates all locks. Individual suites have a unique key while each building has a master key that permits access to all areas—or to targeted areas—for tenants, maintenance, and management staff as well as first responders.

CONSTRUCTION KEYING (CK) allows the contractor of a project full access during the construction period. Once the owner's key is inserted, operation by the initial construction key is permanently disabled.

DOUBLE KNOCKOUT CONSTRUCTION KEYING (CKRK) adds a realtor key between the construction key and the owner key, which essentially allows a real estate professional to get temporary access until final handover to the buyer occurs. Once the owner's key is inserted, operation by the realtor key is permanently disabled.
